

cFluor[®] BYG667 Anti-Human CD14 (MEM-15)

PRODUCT DETAILS	
Catalog Number:	R7-20393 (100 tests) R7-20394 (25 tests) R7-20402 (25 tests)
Reactivity:	Human
Clone:	MEM-15
Format:	cFluor [®] BYG667 ¹
Isotype:	Mouse IgG1, κ
Test Dilution:	5 μL / test
Application:	Flow cytometry
Formulation:	Phosphate-buffered saline, pH 7.2, containing 0.09% sodium azide and 0.2% BSA (BSA Country of Origin USA)
Storage:	2-8°C and protected from light. Do not freeze

PRODUCT DESCRIPTION

The MEM-15 monoclonal antibody binds to human CD14, a 53-55-kDa glycosylphosphatidylinositol (GPI)-linked membrane glycoprotein that works as a receptor on myeloid cells for ligands such as lipopolysaccharide (LPS)¹. It is found that CD14 is a receptor for and binds to complexes of LPS and LBP with high affinity². It expresses on monocytes and macrophages at high levels. It is also present in some interfollicular dendritic cells and macrophages, reticular dendritic cells and Langerhans cells. The antibody was conjugated to a fluorophore and purified by chromatography

RECOMMENDED USAGE

Each lot of this antibody is quality control tested using flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 μL per 1 million cells in a staining volume of 100 μL. If whole blood is analyzed, then use 5 μL per 100 μL. It is recommended that users titrate the antibody to obtain the optimal result for their specific application.

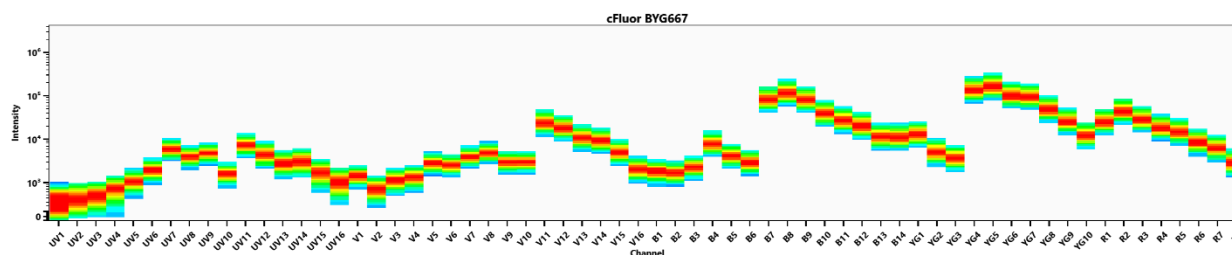

Please briefly centrifuge the reagent vial before use.

Use appropriate personal protective equipment per the product safety data sheet when using this product.

PRODUCT DATA

Human peripheral blood was stained with cFluor[®] BYG667 CD14 (clone MEM-15) (filled histogram) or mouse cFluor[®] BYG667 IgG1, κ (open histogram). Data shown is gated on monocytes.

Spectral signature of cFluor[®] BYG667 from a Cytex[®] Aurora 5 laser system equipped with 355, 405, 488, 561 and 640 nm lasers using CytexAssaySetting.
